2.131(b)(1) **Critical**

Handling of animals.

On March 11,2021 the improper handling of an approximately 5 year old female Cheetah “Izzy”, caused behavioral stress to the animal that resulted in the injury of another facility keeper/employee. Izzy was being transferred from her enclosure to an exercise yard across an employee access road that is not open to the public when the incident occurred. The facility’s internal cheetah handling protocol requires two handlers to use a primary harness with leash, as well as a secondary prong collar and leash to be used at all times. The secondary collar allows the handlers to have a secondary emergency control point to de-escalate any behavioral issues or stress indicated by the animal and ensure the animal is transporting the animal as expeditiously and carefully as possible. According to the report provided by the facility, the two handlers broke facility protocols by having Izzy solely on a harness for the transfer without the required back-up prong collar. During this transfer, another facility employee was also using the access road to perform normal duties at the facility. Izzy lowered her body and exhibited stalking behaviors as soon as she noticed the other employee approaching. After the lead handler thought the cheetah was under control, the handler again broke the facility’s protocol by inviting the other employee to approach the cheetah the cat then lunged and bit the approaching employee, causing injury. Both handlers were reprimanded and will be retrained prior to reassuming normal duties as a Cheetah handler.

Improper handling of a Cheetah can cause unnecessary behavioral stress to the animals or even injury and/or death to all individuals and/or animals involved. All employees/handlers must follow all facility protocols to ensure the safety of all

Type: ROUTINE INSPECTION
Date: 12-DEC-2023

3.125(a)

Facilities, general.

In the giraffe barn a water dispenser has a sharp edge and there is a rusty mineral block holder. The water dispenser is damaged with a chip on the side measuring approximately 3 inches long by one inch high. The chip contained a sharp edge that is accessible to the animals. The mineral block holder has large amounts of rust and is also accessible to the animals. Due to the tactile nature of a giraffe's tongue, sharp edges could predispose them to injury and rust could be ingested by the animal and does not allow for proper sanitation of the surface. The facility must be constructed of such material and of such strength as appropriate for the animals involved. The outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury. Correct by ensuring housing facilities are structurally sound and maintained in good repair. Correct by 1-January-2024.

This inspection and exit interview were conducted with facility representatives.

Additional Inspectors:

ANDREA D AMBROSIO, ANIMAL CARE INSPECTOR

Lauren Murphy, VETERINARY MEDICAL OFFICER

Type: ROUTINE INSPECTION
Date: 09-JUN-2025

3.125(a) **Critical**

Facilities, general.

The facility self-reported an incident that occurred on April 17, 2025, involving the failure of a door separating two groups of lions, which resulted in the injury of two of the lions. In the holding area, the overnight housing enclosures contained two lions each. An adult male lion was housed with an adult female lion and the adjacent enclosure housed two adult female lions, one of which was known to be incompatible with the adult male lion. The staff found all four lions together in the morning and two were injured, the adult male lion and the adult female lion that were previously noted to be incompatible. The facility hypothesized that the sliding panel between the enclosures had been broken by one of the animals. The injured animals received veterinary care immediately. Unfortunately, the injuries to the adult female lion resulted in the animal being euthanized. The adult male lion had minor injuries, received appropriate veterinary care, and recovered uneventfully.

The failure of the integrity of the door resulted in a negative impact to the health and welfare of the two lions. Enclosures that do not properly contain animals can result in injury and stress. Correct by ensuring that the facility is constructed of materials and of such strength as appropriate for the animals housed in the enclosure to protect them from injury and to contain the animals. Prior to inspection, the facility conducted an internal investigation into the matter and implemented improvements to the enclosure doors in order to prevent further incidents. Correct by: June 20, 2025.

Elephants inspected: Phoebe, Rudy, Sonny, Frankie, Johnson.

This inspection was conducted on June 9-11 with the Senior Curator of Animal Care and various zookeepers.

The exit briefing was conducted with facility representatives on June 11, 2025.

Additional Inspectors:

Jonathan Tomkovitch, VETERINARY MEDICAL OFFICER

Facilities, general.

An incident report stated on August 11, 2025, that a section of chain-link fencing in the outdoor off-site holding zebra enclosure failed to safely contain the herd when the facility concluded an individual zebra forcefully hit the gate. The report stated the mesh on the gate was visibly bowed outward, and the gate itself impacted with enough force to rotate the brackets/hangers, resulting in the gate opening. Facility representatives reported 3 zebra were able to wander between their outdoor off-site holding enclosure and the “Savannah” (public viewing enclosure/daytime enclosure). The incident happened overnight, and the animal care staff found the defect in the morning during rounds. Failure to ensure enclosures have sufficient strength can result in animal escape. The facility must be constructed of such material and of such strength to safely contain the animals.

This inspection and exit interview were conducted with the facility representatives.
